

SNOW AND ICE REMOVAL PROGRAM

1. Task

Adequately maintaining all construction access ways, parking lots, and stairs on site in ice/snow conditions.

2. Hazards

Personal Injury, Property Damage.

3. Controls

The following plan will be utilized and activated by site Superintendents and Safety Coordinators during the winter months to minimize the risk of slips on snow and ice on our job sites:

- ❖ Best Personnel has contracted XYZ Construction or our own forces to remove snow from the roadways and parking lots of this project.
- ❖ Best Personnel Superintendent will initiate the call to the applicable snow removal team upon the need to have snow removed. This will be done on an as needed basis.
- ❖ Best Personnel will use the existing labour force to clear sidewalk pathways to the main entrances of the building. The labour force will also maintain the entrances, ramps, and stairs to the project trailers operated by Best Personnel.
- ❖ During normal working hours the labour force will be utilized to maintain snow and ice removal. Sand will be spread in all areas where it is not practical to remove or chip ice away. Sanding will also be maintained on snowy days to all common routes of entry to the buildings.
- ❖ In the event of an evening/after hours snow fall, Best Personnel Superintendent will have labour forces called in early to remove snow prior to normal operating hours of construction. The labour forces will clear Main Building access routes, ramps, and stairs to all Best Personnel project trailers.
- ❖ Please refer to site map for clarity of all common routes which will be maintained during the winter months. All groups working outside of these areas will be required to clear their own work area prior to commencing work.
- ❖ This should be clearly outlined in the work group's daily task card.
- ❖ For all other snow and ice related inquiries, please speak with site Superintendent.
